Many exotic trees and shrubs have been introduced into Africa and become destructive invasive species. They're reducing native biodiversity and limiting the livelihoods of those that live in rural communities. CABI is trying to mitigate these impacts in East Africa by generating and sharing knowledge on their control and management. We are also working to improve the resilience of local ecosystems and the livelihoods of rural communities. We are also working to improve the resilience of local ecosystems and the livelihoods of rural communities. We are also working to improve the resilience of local ecosystems and the livelihoods of rural communities.
